ELLE ’N’ ELLE GYM CENTRE

Colourful and Fully Explained PRD

Akobo, Ibadan, Oyo State, Nigeria

Purpose of this document

This document explains what the gym website contains, why each feature matters, how the project was built, and what remains before launch.

Who can understand it

It is written for the gym owner, designer, developer, project supervisor, and anyone who needs to understand the project.

Project status

The frontend structure and user interface are being developed. Real payment, database storage, and confirmed business details still require completion.

1. Project Overview

The website will act as the gym’s digital reception desk.
It will introduce the gym, explain services and membership plans, display images, collect booking requests, and help visitors contact the gym or find its location.

Simple explanation

Home welcomes visitors; Services explains the offers; Booking collects requests; Contact provides directions and communication.

2. Project Goals

- Create a modern, professional, and trustworthy gym website.
- Explain services, membership plans, instructors, benefits, and FAQs.
- Allow visitors to select a service, date, and time for booking.
- Prepare the booking process for secure online payment.
- Make the website work well on phones, tablets, and computers.

3. Development Process We Followed

- Defined the gym name, location, services, prices, and general identity.
- Created the React project using Vite.
- Installed React Router so different URLs display different pages.
- Created reusable Navbar and Footer components.
- Built the Home page with hero content, images, About, benefits, instructors, feedback, and FAQs.
- Combined Services and Membership into one page.
- Created the Booking page with date, time, validation, price summary, and confirmation.
- Created the Contact page with contact details, feedback form, and Google Maps link.
- Added responsive navigation and mobile-friendly layouts.

4. React Project Structure Explained

- src/App.jsx: controls the main application, routes, Home page, and overall layout.
- src/components/Navbar.jsx: contains the logo, navigation links, and mobile menu.
- src/components/Footer.jsx: contains the standard footer used on every page.
- src/pages/Services.jsx: displays services, membership plans, prices, and booking links.
- src/pages/Booking.jsx: contains the booking form, validation, price summary, and confirmation.
- src/pages/Contact.jsx: contains contact details, map link, opening hours, and feedback form.
- public/images/: stores the logo and gym images used by the website.

How routing works

When a visitor opens /services, React Router displays Services.jsx. When the visitor opens /booking, it displays Booking.jsx.

5. Home Page Requirements

- Hero section with gym name, headline, supporting text, and booking button.
- Hero images automatically change every 7 seconds with a smooth fade.
- Why Choose Us section explaining the gym's benefits.
- Detailed About section and image gallery.
- Mission, community, and values information.
- Instructor section with names, roles, descriptions, and images.
- Feedback or testimonials section using approved content.
- FAQ section answering common visitor questions.

6. Services and Membership Page

- Show Strength Training, Personal Training, and Group Workouts.
- Explain what each service includes and who it is suitable for.
- Display Daily, Weekly, Monthly, Family Package, and Personal Training plans.
- Include prices, descriptions, and booking buttons.
- Use supporting images where appropriate.
- Confirm all prices with the gym before launch.

7. Booking and Payment Process

- Visitor selects a service or membership plan.
- Visitor enters name, email, phone, date, time, and optional message.
- The form validates required fields and prevents past dates.
- The page displays a price summary.
- After payment integration, the visitor is sent to Paystack or Flutterwave.
- A secure backend verifies the payment before confirming the booking.
- The system can later send email, SMS, or receipt confirmation.

Important security rule

Secret payment keys must never be placed inside frontend React code. Payment verification must happe
n on a secure backend.

8. Contact Page Requirements

- Display the confirmed address, phone number, email, and opening hours.
- Include a clickable Google Maps location link.
- Provide a contact or feedback form.
- Show a confirmation message after submission.
- Use a supporting gym image.

9. Design and Branding

- Use the official gym logo in the Navbar, Footer, and browser favicon.
- Use a colourful but professional palette with strong contrast.
- Use readable headings, comfortable paragraph sizes, and clear alignment.
- Use consistent buttons, cards, spacing, and section layouts.
- Use responsive grids that adapt to small screens.
- Give images meaningful alt text for accessibility.

Image filename rule

The filename in the code must exactly match the real file in public/images. For example, logo.jfif m
ust be referenced as /images/logo.jfif.

10. Visitor Journey

- Discover: visitor opens Home and sees the hero slideshow.
- Learn: visitor reads About, benefits, instructors, feedback, and FAQs.
- Compare: visitor opens Services and Membership.
- Book: visitor selects a plan and completes the Booking form.
- Pay: visitor uses online payment after integration is completed.
- Confirm: the system verifies payment and confirms the booking.
- Contact: visitor uses the map, phone, email, or feedback form when needed.

11. Testing and Acceptance Criteria

- All navigation links open the correct pages.
- The mobile menu opens and closes correctly.
- The slideshow changes every 7 seconds and fades smoothly.
- All images, logo, and favicon load correctly.
- Home contains About, instructors, feedback, FAQs, and booking actions.
- Booking validates fields and includes date, time, and price summary.
- Contact includes a working map link.
- The website works on mobile, tablet, and desktop.

12. Information Still Required

- Exact official gym address.
- Correct phone number and email address.
- Confirmed opening hours and membership prices.
- Instructor names, biographies, roles, and photographs.
- Approved testimonials or member feedback.
- Official logo filename and brand colours.
- Payment provider account details.

13. Future Improvements

- Connect booking forms to a database.
- Create an admin dashboard for managing bookings.
- Send email or SMS confirmations.
- Add real-time session availability.
- Complete Paystack or Flutterwave payment verification.
- Add member accounts, renewals, receipts, SEO, and analytics.

14. Final Launch Checklist

- Copy all required images into public/images.
- Confirm that every image filename matches the code.
- Replace placeholder contact details and prices.
- Test all forms and navigation links.
- Test the website on different screen sizes.
- Connect and test the booking backend.
- Test payment integration in test mode before going live.
- Review all content with the gym owner.
- Publish only after business information and policies are approved.

Conclusion

The website is designed to guide visitors from discovering the gym, to learning about it, to booking , and eventually to secure payment and membership management.
